PROJECT REPORT
ON
DIGITAL LITERACY

Submitted By: Stuti Jain
Registration Number: 25BAI10327

Branch: Computer Science Engineering (AI & ML)
Year: First Year (2025–2029)

Course Code: CSE0001
Date – 31 March 2026

INTRODUCTION

Digital literacy has become an essential skill in today's fast-changing technological world. It is not just about using devices, but also about understanding how to use digital platforms safely and effectively. While working on this project, I explored various tools like GitHub, LinkedIn, HackerRank, and Google Forms. At first, some of these platforms were new to me, but gradually I became more confident using them. This project helped me improve both my technical and communication skills. It also made me more aware of online safety and responsible digital behavior, which is very important in everyday life.

TASK 1: INFOGRAPHIC

I created my infographic using **Canva**, as it is a user-friendly design tool with a wide range of templates and visual elements. The infographic focuses on the concept of digital literacy and highlights key aspects such as online safety, responsible internet usage, and awareness about digital communication.

In my design, I included important points like using strong passwords, avoiding suspicious links, protecting personal information, and maintaining respectful behavior online. I used icons, colors, and headings to make the content visually appealing and easy to understand at a glance.

One challenge I faced while creating the infographic was selecting the right layout and organizing the content in a limited space without making it look cluttered. Initially, it was difficult to balance design and information, but after experimenting with different templates, I was able to create a clean and structured layout.

Overall, this task was interesting as it helped me improve my creativity and taught me how to present information effectively in a visual format.

TASK 2: DIGITAL PORTFOLIO

For my digital portfolio, I chose platforms like GitHub and LinkedIn, as both are widely used for professional development. GitHub is mainly used for storing and managing code, collaborating on projects, and showcasing technical work. LinkedIn, on the other hand, is a professional networking platform where individuals can build their profiles, connect with others, and explore career opportunities.

While creating my profiles, I understood how important it is to maintain a strong online presence. GitHub helps in demonstrating practical skills through projects, whereas LinkedIn helps in building connections and presenting achievements in a professional manner.

Over the next four years, I plan to actively use GitHub to upload my academic and personal projects, especially in the field of artificial intelligence and machine learning. I also aim to regularly update my LinkedIn profile with my achievements, certifications, and experiences. Additionally, I plan to connect with professionals and participate in relevant communities.

Overall, these platforms will play an important role in my learning journey and career growth.

TASK 3: PLATFORMS USED

In this task, I worked on platforms like **HackerRank**, **Google Forms**, and **Google Sheets** to gain practical experience. On HackerRank, I solved a basic programming problem, which helped me practice logical thinking and improve my understanding of coding fundamentals. It also gave me confidence in writing and testing code independently.

I also created a Google Form titled “Digital Literacy Awareness Quiz” to collect responses from users. The form included questions related to awareness of digital literacy and online practices. After collecting responses, I viewed and analyzed them using Google Sheets, where the data was automatically organized in a tabular format.

This task was particularly interesting because it involved both technical and practical aspects. Using these tools will help me academically by improving my problem-solving skills and making me comfortable with data collection and analysis.

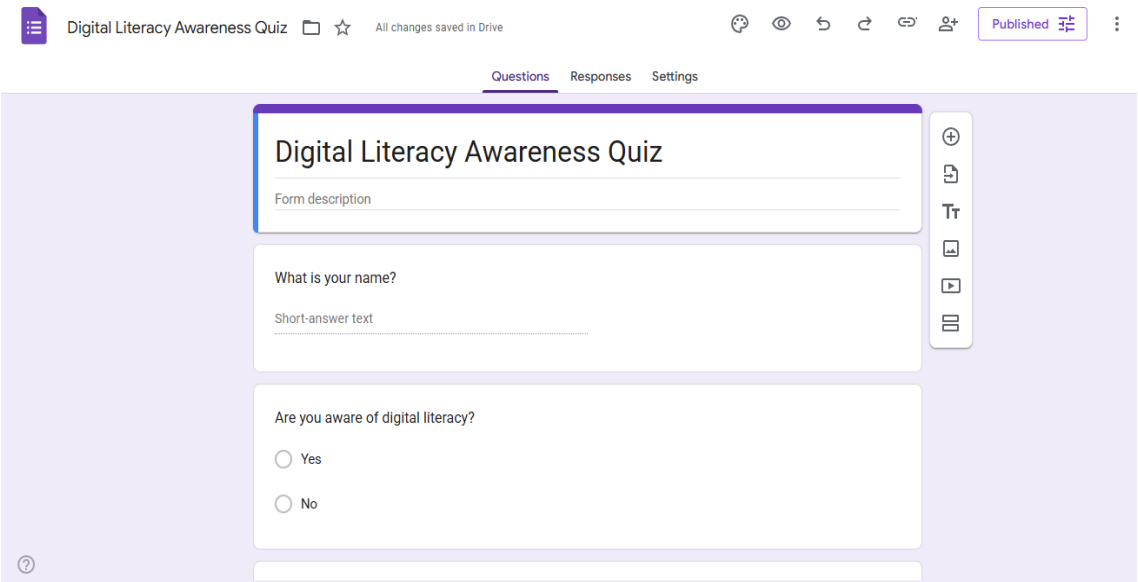
Platforms like HackerRank will help me prepare for coding assessments, while tools like Google Forms and Sheets will be useful for surveys, projects, and research work in the future.

Change Theme Language Pypy 3

```python
n = int(input())

if n % 2 != 0:
    print("Weird")
else:
    if 2 <= n <= 5:
        print("Not Weird")
    elif 6 <= n <= 20:
        print("Weird")
    else:
        print("Not Weird")
```

HackerRank Problem Code



Google Form

TASK 4: EMAIL AND ETIQUETTE

A common situation where poor digital communication can cause problems is when a student sends an email to a professor without proper structure or clarity. For example, if the email has no subject line, uses informal language, or does not clearly explain the purpose, the professor may misunderstand the message or ignore it completely. This can lead to missed deadlines or lack of response.

Such issues can be avoided by following proper email etiquette. The student should include a clear subject line, use polite and formal language, and organize the message in a structured way. It is also important to clearly mention the purpose of the email and provide necessary details.

By improving communication skills and being mindful of tone and clarity, such misunderstandings can be easily prevented.

TASK 5: CYBERCRIME AWARENESS

While researching cybercrime and online safety, what surprised me the most was how easily people can fall victim to phishing attacks. Many of these attacks look very genuine, such as emails that appear to be from banks or trusted websites. It made me realize that even a small mistake, like clicking on an unknown link, can lead to serious consequences such as data theft or financial loss.

This made me more aware of how important it is to stay alert while using digital platforms. One habit I will personally change is that I will always verify the authenticity of emails and links before clicking on them. I will also avoid sharing personal information online unless I am completely sure about the source.

Overall, this experience has made me more cautious and responsible while using the internet.

CONCLUSION

Overall, this project was a valuable learning experience for me. It not only helped me understand the importance of digital literacy but also gave me practical exposure to different platforms and tools. I learned how to present information, communicate professionally, and stay safe online. Each task contributed in a different way to my learning and helped me build confidence. I will continue to use these skills in my academic journey and future career. This project has made me more responsible and aware as a digital user, and I believe these learnings will be useful in the long run.
